Explanation Of Expected Variance

During the most recent quarter ended August 31, 2016, the Company initiated a 3D seismic survey covering a portion of its exploratory acreage in South Australia with funds raised at the very end of the previous quarter ended May 31, 2016. Previously, the Company's activities had focused primarily on raising capital, an activity considerably less costly than oil exploration activities such as seismic surveying.

The company has elected to use the "successful efforts" method in accounting for its oil and gas exploration and production expenditures. This methodology requires that expenditures such as those made recently be expensed during the quarter.

The contracted value of the oil exploration work exceeds \$2.3 million, 90% of which was spent during the quarter ended August 31, 2016. The reported loss associated with the this expense alone is estimated to be more than 20 times the total expenditures recorded during the quarter ended August 31, 2015.

Therefore, the Company anticipates that the reported loss for the 3-month period ended August 31, 2016 will change significantly from the loss reported for the comparable quarter ended August 31, 2015.
